EDUCATION

Course ZarMarathon JavaScript

In this course we are created a fithing-game.

- You will see code there Mortal Kombat
- Remake this project on React
- Resul in my Portfolio

Course ZarMarathon React

In this course we are created a pokemon-game.

- You will see code there Pokemons

SKILS

- JavaScript
- HTML / CSS
- SASS / LESS
- Handlebars
- React
- Redux
- React Hooks
- React Router
- PostgreSQL / SQL
- Json
- GIt

EXPERIENCE

Softpro

August 2020 | Now.

- The first project in which I took an active part was web-site "Lutska Rada". I did almost all the layout on it. An interesting part of the task was to make several color themes. (Get familiar with css variables and localStorage).

- The second project is the "National Spatial Data Infrastructure". This is a widescale project. On it, I got acquainted with tough deadlines and rework.

- Third project, in my opinion, was the most interesting - an online store for the pharmacy chain "Aptekar". Here we made an interesting design, a large number of animations and sliders.

-Now I am working on a project "State Construction System". This is the largest project in my company. It is designed to create documents and control their issuance. The most difficult and interesting is constant communication with the customer. Because of this, you immediately feel the importance of your work. There is also a very strict cycle of updates, so you take the work done much more seriously.
